Bacolod City, Philippines

October 2026

Executive Summary

Brewed Horizon is an artisanal, fast-service mobile coffee enterprise designed specifically for the student and faculty demographic at STI West Negros University. By offering high-quality Negros-sourced robusta and arabica blends at affordable student price points (P45 to P85), the venture bridges the gap between commercial instant sachets and expensive off-campus coffee shops. With an initial capital expenditure of P120,000, Brewed Horizon projects operational profitability within its third operating month.

1. Market Opportunity and Competitive Advantage

The campus population exceeds 4,500 enrolled students and staff with high daily demand for caffeinated beverages during early morning class blocks and late afternoon programming laboratories. Current options are restricted to university cafeteria instant dispensers and external cafes located three blocks away across congested thoroughfares.

1.1 Competitor Benchmarking

Table 1. Campus Beverage Competitive Landscape Matrix

Provider Option	Average Price	Wait Time	Value Proposition
Campus Canteen Instant	P20.00 – P25.00	Instant	Low cost, powdered sachets, limited flavor
External Commercial Cafes	P130.00 – P180.00	12–15 Minutes	Premium seating, excessive price for daily budget
Brewed Horizon Cart	P45.00 – P75.00	2–3 Minutes	Freshly brewed local beans, student discounts, speed

2. Product Line and Operational Workflow

The cart features four signature core offerings: Kape Barako Americano, Sweetened condensed milk Spanish Latte, Iced Matcha Fusion, and Cold Brew Concentrate. Equipment includes dual commercial semi-automatic espresso extractors, solar-assisted battery invertors for grinder power, and insulated beverage dispensers.

STRATEGIC SUPPLY CHAIN ADVANTAGE: By partnering with organic coffee cooperatives in Canlaon and northern Negros, supply costs are reduced by 22% while guaranteeing farm-fresh single-origin roast profiles.

3. Staffing, Logistics, and Sanitation Standards

Staffing will utilize student interns under working-scholar arrangements, offering fair hourly stipends and schedule flexibility around college lectures. Daily operations adhere strictly to Bacolod City sanitary permit requirements, including food-grade stainless steel surfaces, potable water carboys, and biodegradable sugarcane-bagasse cups.

4. Financial Projections and Budget Outlay

Financial models assume a conservative baseline of 120 cups sold daily during peak semester periods (22 operating days per month). Capital outlay is allocated across cart fabrication (P45,000), espresso equipment (P50,000), initial inventory (P15,000), and operating permits (P10,000).

Table 2. 12-Month Projected Income Statement Summary

Operating Metric	Quarter 1	Quarter 2	Annual Total (Year 1)
Gross Beverage Sales	P356,400	P412,500	P1,544,400
Cost of Goods Sold (COGS)	P124,740	P144,375	P540,540
Operating Expenses (Rent/Labor)	P112,000	P112,000	P448,000
Net Operating Income	P119,660	P156,125	P555,860

5. Marketing Strategy, Loyalty, and Sustainability

Marketing relies on digital engagement via GCash/Maya QR payments, a 'Buy 6 Get 1 Free' digital stamp card integrated with Telegram, and exam week hydration packages. Word-of-mouth campus influencers and IT student partnerships will drive launch week velocity.

To advance environmental sustainability, students bringing reusable tumblers receive an automatic P5 rebate, minimizing campus single-use plastic waste.

6. Risk Management and Contingency Matrix

Key operational vulnerabilities include raw bean price inflation, rainy weather impacting courtyard foot traffic, and semester break lulls. Mitigation strategies include forward purchasing contracts with local bean growers and pop-up agreements for indoor university sports and academic summit events.
