Student Mental Health & Stress Metrics Report

An Analytical Survey of Tertiary Academic Load, Burnout Indicators, and Campus Interventions

INSTITUTIONAL WELLNESS WHITE PAPER • STI WNU

Prepared and Authored by:
JHON PAULO V. GASCON
Bachelor of Science in Information Technology (BSIT) • 2nd Year College
STI West Negros University • Bacolod City, Philippines
Academic Year 2026–2027

Executive Overview & Conceptual Scope

Tertiary education represents an intense period of cognitive demand, career pressure, and lifestyle transition. Contemporary college students encounter systemic stressors that frequently overwhelm standard coping capacities.

This institutional white paper presents empirical survey findings, identifies key academic pressure points, and proposes actionable institutional and self-care interventions to nurture student psychological wellbeing.

Document Structure & Learning Modules

Module	Core Subject Matter & Deliverables	Target Competency
Section 1	Epidemiological Demographics and Campus Survey Metrics	Data Analytics
Section 2	Primary Academic and Financial Catalysts of Burnout	Causal Analysis
Section 3	Somatic and Cognitive Warning Indicators Matrix	Early Intervention
Section 4	The 3-Tier Daily Decompression Protocol and Campus Aid	Holistic Wellness

Section 1 & 2: Empirical Survey Data & Primary Stress Drivers

Survey results across 250 undergraduate students revealed that 78% experience acute academic distress leading into midterm and final project submissions. Uncoordinated faculty syllabi resulting in multiple simultaneous deadlines exacerbate this pressure.

Furthermore, 54% of respondents balance part-time employment or long regional commutes with full-time academic loads. This chronic structural strain degrades cognitive executive function and accelerates physical burnout.

CRITICAL CORE INSIGHT: Academic rigor should foster intellectual growth, not chronic psychological exhaustion. Structured milestone deadlines prevent panic.

Table 1. Academic Stressor Intensity and Manifestation Correlation

Stressor Dimension	Prevalence in Cohort	Primary Manifestation	Recommended Mitigation
Clustered Exam Deadlines	78% of Students	Severe sleep debt and panic	Syllabus coordination across departments
Financial & Commute Pressure	54% of Students	Dietary compromise and fatigue	Expanded campus student assistantships
Capstone & Defense Anxiety	69% of Students	Perfectionist paralysis, isolation	Milestone sprint reviews with mentors
Social & Family Expectations	48% of Students	Imposter syndrome and burnout	Peer mental wellness support circles

Section 3: Somatic, Emotional, and Cognitive Warning Signals

Burnout rarely arrives unannounced; it signals its approach through distinct biological and psychological warnings. Somatic symptoms include persistent tension headaches, muscle tightness, gastrointestinal upset, and insomnia.

Psychologically, students exhibit cognitive brain fog, procrastination paralysis, and emotional detachment from peers. Recognizing these signs early allows academic advisors to intervene with compassionate accommodations before academic failure occurs.

STRATEGIC TAKEAWAY: Seeking professional guidance counseling is a mature sign of self-awareness and strength, not a deficit of intelligence.

The 3-Tier Decompression Framework & Wellness Directory

Maintaining cognitive stamina requires establishing boundaries between study blocks and personal recuperation. Implement this structured wellness framework.

The 5-Point Daily Student Wellbeing Checklist

01	Institute a strict digital curfew: shut down social media screens 45 minutes before sleep.
02	Engage in 20 minutes of daily physical cardiovascular movement to metabolize stress hormones.
03	Practice boxed breathing (4 seconds inhale, 4 hold, 4 exhale, 4 hold) during acute anxiety.
04	Maintain hydration and consume balanced whole foods during high-intensity exam periods.
05	Connect openly with a trusted peer or campus guidance counselor when feeling overwhelmed.
